

SUMATRAN TIGER

Set 1

Scientific Name: *Panthera tigris sumatrae*
Common Name: Sumatran tiger

Sumatran Tigers are amazing big cats that live on the island of Sumatra. They are very rare and need our help to survive.

Appearance

They have bright orange fur with black stripes and a white belly. Their stripes are close together, which helps them hide in the forest. They have strong paws and sharp claws.

Habitat

Sumatran Tigers live in thick forests and wetlands. They use plants and shadows to stay hidden.

herbivore

omnivore

carnivore

Food

Sumatran Tigers are carnivores and eat animals like deer and pigs. They sneak up on their prey instead of running fast.

Predators

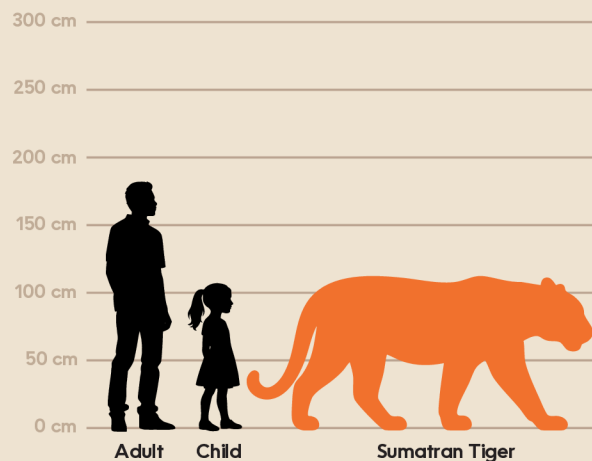

Adult tigers are not hunted by other animals, but humans are their biggest danger. Cutting down forests makes it hard for them to find food.

Behaviour

They hunt mostly at dusk and can walk long distances at night. They like water and can swim very well.

Sumatran Tigers are strong and beautiful animals, and protecting their homes helps keep them safe.

HOW BIG ARE THEY?

DID YOU KNOW?

- The Sumatran Tiger's roar can be heard from far away.
- Sumatran Tigers can swim long distances.
- Sumatran Tigers can jump more than 5 metres.
